SDG Partnership Platform SDG 3 Cluster- Primary Healthcare Accelerator Window
Identification of promising business and financing model in Kenya for Primary Healthcare

Strathmore Business School, Transcentury Auditorium
Date: Thursday, 8th March 2018, 7:30 am - 5:00 pm

Achieving the Sustainable Development Goals (SDGs) will be as much about the effectiveness of development co-operation as it will be about the scale and form such co-operation takes. There is a lot of talk about partnership, but not enough practical, on-the- ground support to make partnerships effective in practice, especially not at scale.

Whilst Kenya has made substantial progress towards meeting the Millennium Development Goals, this progress has been uneven across specific goals and within the country. Strides have been made in attaining universal primary education, reducing infant and child mortality and the fight against HIV/AIDS. However, SDG progress must focus more on socio-economic equity of benefits in order to make sure that Kenya leaves no-one- behind.

The Government of Kenya and UN System in Kenya established in 2017 the SDG Partnership Platform in collaboration with development partners, private sector, philanthropy, academia and civil society including faith-based stakeholders. The Platform will be anchored in the United Nations Development Assistance Framework and take leadership on overarching facilitation, coordination and demonstration of how Public Private Partnerships can effectively translate the SDGs into action on the ground and thereby guide and accelerate impact, maximize investments and optimize resource utilization.

The Platform will focus on four key strategies:

1. Joint advocacy and policy dialogue to create an enabling environment that helps partnerships thrive.
2. Identify and broker large scale PPPs that align with the SDG themes reflected in the Kenya UNDAF Strategic Result Areas, and drive shared value creation.
3. Raise required investments for the PPPs under 2 above, through optimizing a diversity of blended financing instruments and redirection of capital flows towards SDG implementation, engaging a wide range of stakeholders from public and private sector.
4. Facilitate monitoring and evaluation, learning and research to inform best and promising policy and practices for SDG partnerships.

The Platform brings together a range of partners from Government, development partners, private sector, civil society, philanthropy, academia, and faith-based organizations to create diverse SDG accelerator windows. Primary Healthcare (PHC) - contributing to the SDG 3 cluster - will be the first window aiming to improve Universal Health Coverage through transformation of Kenya's Healthcare System, starting at the PHC level. Subsequently, the Platform will open additional windows to support thematic SDG clusters in support of Kenya's "Big Four" such as agriculture, and skills training and employment etc.

Whilst the SDG Partnership Platform aims at contributing to the SDG target 17.17: Effective public, public-private and civil society partnerships, building on the experience and resourcing strategies of partnerships encouraged and promoted in Kenya, more specifically the SDG3 Primary Healthcare Accelerator Window aims at contributing to the results of the following three sub-outcomes:

1. Enhanced national and county government capacities to efficiently and effectively identify, design, finance, purchase, and manage large-scale Primary Healthcare PPPs.

2. Innovative blended financing mechanisms designed in support of the Government of Kenya domestic resource mobilization agenda for health.

3. Improved delivery of the Primary healthcare system, through increased public private collaboration, to better address Kenya's triple burden of disease.

The SDG3 Cluster- Primary Healthcare Accelerator Window's work will be implemented through a three phased-approach *(I. Diagnostics and Facts, II. Design and Planning and III. Active facilitation of on-the- ground implementation (national and county level)* under which a common fact-base will firstly be established for Platform members to jointly identify selected bold transformative initiatives in pursuit of the Platform goals and objectives; secondly to carefully design and plan with key stakeholders for the successful delivery of these initiatives; and thirdly to facilitate implementation of the initiatives.

Purpose of the Workshop

The workshop is aimed at *exploring promising business and financing models for scaling up primary healthcare Public-Private-Partnership (PPP) in Kenya* in order to identify modalities for optimization of public private collaboration for Health in Kenya and therewith contribute at most to Kenya's UHC agenda under the Big Four.
